Abstract (en)

Patient bed (1) comprises a frame (2) with a cavity (8) delimited overhead by a perforated surface (3) where the patient (4) lies. A hood (5) at least partially covers the patient. There is a channeling system (6) on the inside of the frame. The cavity has a series of vertical walls (9) creating separate chambers (10a,10b,10c), each receiving the steam (7) fed by the steam channeling system.

The invention produces a bed for cosmetic/therapeutic steam treatments (1) comprising a frame (2) provided with a cavity (8) delimited overhead by a perforated surface (3) where the patient (4) lies, a hood (5) suited to at least partly covering said patient (4) and means of channelling steam (6) towards the inside of said frame (2). The cavity (8) has a series of vertical walls (9) creating separate chambers (10a, 10b, 10c), each suited to receiving the steam (7) fed by said means of channelling steam (6). <IMAGE>
