Abstract (en)

[origin: EP1046485A2] Perfected multiple mill cutter composed of four concentric mill cutters (3), (4), (5) and (6), attached to an axle, joined to a motor, configuring the mill cutter a spherical or semispherical body obtained from the stone block by the four mill cutters. <IMAGE>
[origin: EP1046485A2] A mill cutter comprises four concentric steel mill cutters (3,4,5,6) attached to an axle (2) with an external helicoid-threaded extension, joined to a motor (6). The cutters each have a semi-sphere body and include cylindrical extensions, helicoid threaded on the inside with a diameter coinciding with the axle extension. This allows the cutter to be attached with several rectangular diamond bits (5) on the edge of the half-spheres.
