Abstract (en)

[origin: EP1046512A2] The device consists of a heatable high-pressure press mounted on a base frame (1) having laterally running box section membe (2,3). A table surface (17) is located in the base frame and is moveably mounted on roller guides. A press table (19) is attache the table surface via a spacer section (18) while a circular air spring (20) is provided beneath the table surface for lifting t press table up against a lower heated body (16). A traverse (14) is provided at the top of the base frame and supports both the lower and an upper (15) heated bodies in a manner whereby they can be lifted up and down.
