Abstract (en)
The present invention relates to a foldable stand comprising a series of frame sections arranged partly to support seat/standing surfaces, partly to transfer the load from said surfaces to a supporting foundation, wherein the frame sections (1, 4, 6, 7) are rotatably arranged visavi a wall section (2) being arranged to be fastened to a wall or a corresponding object, and to rest upon a supporting foundation, that the frame sections (1, 4, 6, 7) are internally connected with leg sections (5, 8), that the leg sections (5, 8) and the frame sections (1, 4, 6, 7) are rotatably connected with each other, and that all frame sections (4, 6, 7) except for one (1) carry directly against the supporting foundation via said leg sections (5, 8), whereby the frame section (1), which is not carrying against the supporting foundation is joined to a lower frame section (4) via a rotatably arranged supporting leg (3).
<IMAGE>
The stand has frame sections (1,4,6,7) rotatably arranged. A wall section (2) is arranged to be fastened to a wall or a corresponding object, and to rest upon a supporting foundation. The frame sections are internally connected with leg sections (5,8) so that the leg sections and the frame sections are rotatably connected with each other. All frame sections except one (1) carry directly against the supporting foundation via the leg sections, and the frame section which is not carrying against the supporting foundation is joined to a lower frame section via a rotatably arranged supporting leg.
