Abstract (en)

[origin: WO9935942A1] The invention concerns a device comprising two inverted U-shaped parts (2, 3), integral with a base (15, 17), the rear branches (5, 7) of the U being mutually parallel at a distance of 40 mm from each other, the two front branches (4, 6) being located at 120 mm from each other, the two branches (2, 3) forming a guide groove inside which the user's foot can slide from the top downwards, pushing a sock or support stocking previously placed inside out along the two lateral parts.
