Abstract (en)

[origin: FR2773784A1] Atomizing head has an outlet channel (1), an atomizing orifice (9), a spring-loaded shutter (10) urged towards its closed position, and a swirl chamber (20) which is at maximum volume when the shutter is in the atomizing position. Atomizing head has an outlet channel (1), an atomizing orifice (9), a spring-loaded shutter (10) urged towards its closed position, and a swirl chamber (20) which is at maximum volume when the shutter is in the atomizing position. The shutter (10) has the atomizing orifice and swirl channels (30) connecting the outlet channel to the swirl chamber when in the atomizing position, and the volume and shape of the channels remain constant whatever the position of the shutter. The parts of the atomizer head in contact with the product are of a bacteriostatic material.
