Abstract (en)
[origin: WO9936634A1] A bath drainage system comprises a bath drain (1) with a bath drain pipe (3) and a bath drain closure (4), a stench-trap (7), connected to the bath drain (1), with a sewer connection (17), and an overflow device (23) with an overflow pipe (26). The bath drain closure (4) and the stench-trap (7) together form a combination unit (5) to which the bath drain pipe (3) and the overflow pipe (26) are connected. The combination unit (5) further comprises at least one sewer connection (17). The thus obtained universal bath drainage system can be used not only in a standard bath, but is so designed that it is eminently suitable as a return suction in a bath of whirlpool design.
