Abstract (en)
[origin: DE19801487A1] The dart (10) can be thrown or shot from a bow at the target and has a sensor unit (28) for determining a hit of the dart on the target. The sensor unit transmits a repeating control signal when the target is hit. The control signal causes the transmission unit (30) to transmit the data from a signal transmitter unit (20). An acceleration sensor determines a characteristic acceleration value for a throw or flight of the dart.
