Abstract (en)

[origin: FR2773863A1] The manipulator has a magnet (27) and armature (28) to retain the cam (20) controlling the thrusters in an extreme position. One magnet component (27 or 28) rotates on a shaft (29) attached to a mount (32) pivoted on the cam. Guides (30,31) on the body (1) and the cam retain the support shaft and hold the magnetic components parallel and coaxial when the cam is inclined in any direction.
