Abstract (en)  
[origin: EP1048257A2] The base of the dispenser housing (2) has a concave middle section (9) whose axis of curvature runs parallel to the front and back walls (4, 5) of the housing. The end edges of the middle section lying parallel to the side walls change through curved bend lines (12, 13) into flat upwardly inclined side base end sections (14, 15) which are connected to the side walls. The bending lines are bent inwards so that the middle base section has its shortest length along its longitudinal centre line running parallel to the axis of curvature. The dispenser housing is closable by a lid (8) which has in the delivery opening (19) area a protruding part for covering the opening so that only a slit remains open which extends over the entire length of the opening.
