Abstract (en)

[origin: EP1048359A2] The spray coating gun includes a manually adjustable path restricting means (2) through which the trigger-adjustable maximum operating path of the first valve body (8) and thus the adjustable largest possible flow opening cross-section of the material v (6, 8) can be restricted alternately to at least two different values. The path restricting means has an adjusting part (70) who is alternately adjustable corresponding to at least two values in the piston longitudinal direction to at least two different longitudinal positions and is coupled to the second valve body (18) of the throttle valve (16, 18) for common adjustment in the pistol longitudinal direction.
