Abstract (en)  
[origin: EP1048411A1] The spanner has a guide column (2) and clamping shoe (4) axially adjusted relative to column through clamping means (8, 9). clamping shoe is restricted in its movement about the guide column by suitable means such as a positioning ring (12) mounted on column and having a stop (14) interacting with a counter stop (17) on the shoe which limits its swivel region. The positioning ring can be detachably mounted on the guide column. A spring can be provided between clamping shoe and guid column
