Abstract (en)
A sealed container which can contain contents larger than a main container, is tightly closed by heat sealing a cap container to the main container and can be opened easily, is provided. A sealed container which comprises a cap container having a flange portion and a convex portion and a main container having a flange portion, wherein the cap container is formed from a multi-layer sheet composed of two or more layers comprising an outermost layer made of polycarbonate and an innermost layer made of a resin which can be heat sealed to the main container, a peripheral portion of the flange portion of the cap container has a fitting portion which covers and fits to the flange portion of the main container, the cap container and the main container are heat sealed to each other at the flange portions, and the heat sealed flange portions of the cap container and the main container can be easily opened. <IMAGE>
