Abstract (en)

[origin: EP1048600A2] At the sheet output of a sheet printer flow machines, in the form of axial blowers (26), are positioned so that they capture air flow (31.1, 31.2) that is trying to escape from the printer and return it to the inside of the printer in a return air flow (29.1, 29.2). Thus an air circulation is produced and any powder that is contained within the air is prevented from escaping.
