Abstract (en)
The object of the invention is an improved automatic corkscrew configured as a main L-shaped body of - which the longer arm (2) actuates as a handle, while the shorter arm (1) is integral at its extremity with a longitudinal spiral part (6);it incorporates a motor (11) which is activated when pressing on the button - (12), a battery (4) and a tap point for recharging - (3) said battery. The shorter arm (1) incorporates - in its internal face a ring(14) through which a toothed (10) longitudinal part (5) can slide, said part being extended by a preferably circular and transverse segment (7) which bears directly against the cork to be extracted and through which the spiral (6) can pass The last part is a longitudinal actuation bar (8) terminated by a toothed stop (9) which is directly incident with respect to the teeth (10) cut in the support bar (5). <IMAGE>
