Abstract (en)

[origin: EP1048748A2] The molding consists of two polymers (2, 3). One is, electroplated and the other is not. Polymers are separated by a V-profi An Independent claim is included for the corresponding method. This comprises essentially of successive injection molding i the same mold, to make the component of the two plastics, subsequently electroplating one of them. In a variant a molding is inl before back-injection. Preferred features: The plated part has a tab for connection to electroplating (8) contact clips (5).
