Abstract (en)

[origin: EP1048988A2] A lever (2) is fitted to the side of a watchcase (1) and may be rotated about an axis (4). The lever has a curved central portion (7) which engages with a throat in the winding crown (3) such that the latter may not inadvertently slide longitudinally. In the locked position the lever (2) is secured by an elongated semicircular section (6) which fits over a locking stop (5).
