Abstract (en)
[origin: WO9930880A1] Method and device for the feeding of boards (6) to be sawn in an edging sawmill, the device consisting of a feeding device (1) comprising a feed conveyor (3) upon which the boards (6) are fed up to the edging sawmill, a cross conveyor (2) upon which the boards (6) are moved in their cross-direction up to the feed conveyor (3) and a centering device (5) by means of which the boards (6) are put in the desired position on the feed conveyor (3). A lifting device (4) is arranged between the cross conveyor (2) and the feed conveyor (3) by means of which the boards are lifted from a lower position below the level through the upper side of the feed conveyor (3) to an upper position on that level into a holding device (5).
