Abstract (en)
[origin: WO9937487A1] A writing tool has a housing (6) which holds in a section (5) opposite to a writing insert a stamping device with an ink pad (3) and a stamping plate (2). The stamping plate (2) is mounted in a holder (1) movable with respect to the housing section (5) and can swivel about a transverse axis between a swung out work position transverse to the holder (1) and a rest position in which it is swung in against the holder (1) and lies against the ink pad (3). In order to create an advantageous design, the holder (1) in the housing section (5) and the ink pad (3) in a housing insert (7) can be moved independently in the direction of the axis of the housing up to a stop and the housing insert (7) in the housing section (5) can be moved transversely to the ink pad (3) and lifted off the holder (1) against the force of a spring.
