Abstract (en)

[origin: WO9937743A1] The invention concerns a solid or liquid fuel composition capable while burning of producing a selected and varied coloured flame other than a standard flame usual colour. Said composition is characterised in that it consists essentially of triethanolamine and a colour-forming agent. The invention also concerns a candle or lighting device with coloured flame prepared from said fuel composition. The invention further concerns a method for making a candle with coloured flame comprising steps consisting in casting said composition in a mould wherein a taper has been previously fixed, cooling the cast composition and stripping the candle.
