Abstract (en)
[origin: WO9937869A1] The invention relates to a glass panel suspension of a glass light ceiling, in which a glass panel (4, 5) is suspended on suspension rods (6, 7) only in selected points and the suspension rods are elastically suspended in a pendular manner at the top. Connecting elements (25, 26, 27, 28; 29) which freely pass through openings in the glass panel (4, 5) and hold said glass panel (4, 5) are removably attached to the end of the suspension rods (6, 7). In this way the glass panel (4, 5) is held securely but only little shade is cast by the glass panel suspension.
