Abstract (en)
[origin: WO9939296A1] The invention relates to a system which permits the proposal of entertainment games and/or wagers with money while using remote data transmission and which executes the entertainment games and/or wagers. According to the invention, a data processing system (10) controls and manages the access of players, and entertainment game and/or wager devices (20) are optionally connected to the data processing system via a remote data transmission. Input/output stations (30) at the location of the player are both connected to the data processing system (10) and to the entertainment game and/or wager devices (20). An access control device (12) communicates bidirectionally with the input/output stations (20) which are additionally provided with a control unit (34), outputs an enabling signal when an entitled access is available, and determines the enabling of the control unit for the entertainment and wager devices (20) via the output.
