Abstract (en)

[origin: FR2774194A1] The connector has a clip (3) that receives the electronic card (16) and has connecting pins inside to make contact with contact pads on card. The clip contains a protocol conversion circuit that translates the data flow to and from the card into a standard communication protocol (USB, RS232, ...) in use with personal computers. The connector has a link (5) to connect to the appropriate communication port on the computer (2).
