Abstract (en)

[origin: WO9923617A2] The invention concerns the combined use of at least two communication networks and more precisely confidential data exchange to a first data medium user by means of a second data medium via a mechanism synchronising the data media and sending data from one medium to the other. The data transmission method on a first medium thus consists in: an operation for opening a communication session with means of communication remotely located, on said first communication medium; and during said session: an operation for receiving confidential information on a single address terminal on a second communication medium; and an operation for transmitting, on the first communication medium, a confidential message representing the confidential information; an operation for verifying whether the confidential message corresponds to the confidential information.
