Abstract (en)

[origin: WO9957692A1] The invention concerns a global system for collecting, transporting and processing statistical, monetics, technical alarm, multimedia data applicable on automatic dispensing machine pools, for providing remote services concerning management, advertising, consultation maintenance, dynamic monitoring of replenishment operations, using any type of microwave network in a dispensing machine collecting and transporting subassembly and any type of wire system in the processing subassembly. The latter has a security architecture involving three separate and interactive types of processing: supervision, hypervision and geographical querying system.
