Abstract (en)

[origin: EP1050231A1] A container (2) contains the product and an applicator (10) is provided with a application element (11) and a drying part (3) having a deformable resilient wall passed through by a slot (7) for passage of the application element and defining drying lips (20). The deformable wall is able to take, under the axial force exerted by the applicator, different first and second configurations during the introduction and the withdrawal of the applicator. The initial shape of the resilient wall is chosen s that the drying lips are applied with different forces on the applicator during its introduction and withdrawal.
