Abstract (en)

A device (1) for foldably connecting a supporting leg (2) to a piece of furniture is described which comprises: a fixing plate (3), adapted to be mounted under a supporting shelf (4) of said piece of furniture by means of respective fixing means (5); pivoting means (6) associated to the fixing plate (3) on which means the leg (2) is rotatably mounted about an axis (y-y), substantially perpendicular to a longitudinal axis (x-x) of the leg (2) itself, between a first operating position, substantially perpendicular to the plate (3) and a second non-operating position, substantially parallel to the plate (3), clamping means (7) for removably fixing the leg (2) in said first operating position, wherein the pivoting means (6) of the leg (2) comprises a supporting element (8) rotatably mounted in an idle manner on said plate (3) about a normal axis (z-z) of the plate (3) and wherein said clamping means (7) cooperates with said supporting element (8) for fixing said supporting element (8) and the leg (2) associated therewith in said first operating position. <IMAGE>
