Abstract (en)

[origin: EP1050325A1] The snowboard binding clasp is formed from a base, a boot retainer, as hoop (4) that is integral with the base and an oversl (19) that is articulated to the base. A stop formed on the oversleeve limits rotation of the oversleeve relative to the base in anti-rearward direction. The stop has teeth (44). A base (29) held on to the oversleeve by a rivet (32) has teeth (31) which mesh with the stop teeth in order to wedge the stop on the oversleeve.
