Abstract (en)

The present invention is for method by production of panels from materials which can be nailed and method for positioning of nailing units at a nailing gantry with several nailing units. The invention also is for means for use by the methods. According to the invention the work tables (1, 2) are arranged alongside each other so that turning of the panel also includes moving it from the first to the second work table. The nailing units have means for releasable connection of the first nailing unit (13) with each further single nailing unit (12A-12E) so that the movements of the first nailing unit brings with it corresponding movements of one further nailing unit and means to keep each further unit in desired position. <IMAGE>
