Abstract (en)

[origin: US2002053294A1] A web offset printing press for dual webs includes several printing units, each printing a color image on outer sides of a pair of webs. The webs travel through these printing units in a back-to-back arrangement. Additional printing units print another color image on the outer side. The webs may be separated during this process, with a pair of printing couples used for each web, so that one couple may print the additional image while the plate of the other is changed. The additional printing units also print a single-color image on the opposite side of each web.
