Abstract (en)

[origin: EP1050408A1] The device has a controller (30) that controls the application and removal of a pressure element (20) to the cylinder surface during cleaning depending on defined angular positions so that during first and second cleaning phases the pressure element is applied during each revolution whilst a first or second surface section (10A,10B) between gripping devices (12) is passing by it and removed whilst a second or first surface section between gripping devices is passing.
