Abstract (en)

[origin: EP1050459A2] A closer (5), movably mounted on a rail (50), has its position monitored by a positioner (6) unit. Depending on the position the closer, a control controls a clamp (40) in order to prevent the plastic sheeting (20) from tearing and or the contents (1) f shifting position. The contents are enclosed on one or more sides by a sheet and stay between two lengths (21,22) of sheeting. T closer positions the two sheets so that they are welded by a sealing unit (8); the two cut ends of the middle sheeting part are welded.
