Abstract (en)
[origin: US6499281B1] A deflecting subassembly 10 for the guided deflection of a band 12 consisting, in particular, of plastic may be provided, in particular, for a strapping machine 16 comprising a strapping subassembly 14, for the purpose of deflecting the band 12 in a region located between a band store 18 and the strapping subassembly 14. The deflecting subassembly comprises a deflecting roller 20, a band-inlet channel 22, which is arranged upstream of the deflecting roller 20, a band-outlet channel 24, which is arranged downstream of the deflecting roller 20, it being possible for the band-inlet channel 22 and the band-outlet channel 24 to be adjusted relative to one another, and an outer, flexible directing member 26 which bridges the interspace between the band-inlet and band-outlet channels 22 and 24, respectively, and is located opposite the outer circumference of the inner deflecting roller 20.
