Abstract (en)

[origin: EP1050473A1] The applicator incorporates a plastic container (1) which tapers on one side to an open point (2). The outer surface (11) of plastic container includes a flexible section (4) consisting of several, superimposed folds (41). The surface facing the point h further opening (5) closed by a porous head (51) made of sintered material produced by compressing plastic particles or open-cel foam and coated with fabric.
