Abstract (en)

[origin: EP1050505A1] The work unit consists of a lift-cabin (2) with height-adjustable maintenance platform (10) which travels along the lift shaft (1). The floor (12) of the lift-cabin forms a stand (12) which can be continuously adjusted by a driven hoist (13) and can contain the stowed-away platform. The drive for the lift can be switched over to inspection from normal operation by opening a hatchway in the ceiling (14.1) of the cabin. Sensors (16.1, 16.2) of a cabin-switchboard control the hoist.
