Abstract (en)
[origin: DE19920566C1] In the structure of a garden house, the upper planks (21) of each side wall extend over the upper end of the upright post (1) on their vertical extension. Each upper plank (21) is secured to each upper plank of the adjacent side wall by a locking unit (3), with a flat section which is at a gap (h) from the upper flat surface of the post (1) and parallel to it. A drilling is at the upper flat surface of the post (1), within its contour, to take a threaded spindle (4) which is locked into the post (1) below its upper surface. A nut (41) is screwed on to the spindle (4) over the flat locking section. A spring (42) is between the nut (41) and the facing side of the flat locking section.
