Abstract (en)
[origin: EP1050935A2] The holder has a housing (7) made of an electrically insulating material, and including at least one contact opening (12) leading into an internal space (11). At least one connection opening (41) is provided for passing a connection wire (23) into the intern space. A bearing device (21) is provided in the internal space for fixing a stripped end of the connection wire passed through t connection opening, and supporting it against the connection piece (3) of a starter device. The starter is preferably mounted on holder so that the contact openings prevent its rotation.
