Abstract (en)
[origin: DE19911863A1] A first control path includes a series connected a first current control element (4) and a first bypass element (6) controlling a power supply for an actuator (7). The latter in its first connection is connected between the first current control element (5) and the first bypass element (6) and in its second connections it is connected with a first pole of a source (1) connected at the first bypass element (6). An Independent claim is included for: (a) an adjustment system for operating an adjustment device in IC engine
