Abstract (en)
[origin: WO0032058A1] The invention relates to a more or less hard, at least solid and independently cohesive mass of ice-cream (2), and engaging means (3) for engaging thereof, for instance two edible flat wafers between which the mass is received, a rolled wafer inside which the mass is received, which rolled wafer takes the form of for instance a cornet, a non-edible packaging of for instance paper, aluminium foil and/or plastic foil, a stick of wood, plastic or other suitable material inserted into the mass with a part protruding out of the mass serving as handle. The product has the characteristic that it is received in a form-retaining container (4) of plastic or metal, for instance aluminium or tin, which container has a mouth opening through which the product can pass, which mouth opening is closed sealingly by a form-retaining cover (8), for instance of the same material as the container.
