Abstract (en)
[origin: GB2333703A] The invention relates to composition for reduction of the enzyme activity of enzymes, especially those in contact with the human or animal body, in particular of enzymes present in the exudates (such as lipases and other esterases) and to the use of specific complexing agents, including N,N'-ethylene diamine disuccinic acid or a salt (EDDS), for preparation of these compositions. These compositions may be used to treat enzymatic dermatitis (such as diaper/nappy/skin rash) and malodours.
