Abstract (en)

[origin: FR2774317A1] The invention concerns a tube bending machine comprising on the bending arm (4) a magazine device (12) bearing clamping jaws (14) with different impressions, said magazine device being capable of pivoting simultaneously with the bending arm (4) about the bending head (3) for forming the tubes (8), while the magazine device (12) can rotate about its own longitudinal axis and along directions included in planes perpendicular and/or parallel to the plane containing the fixed frame (2) longitudinal axis.
