Abstract (en)

[origin: WO9923045A1] The composition of an agglomerated material, advantageously used for the production of slabs for floors and/or coverings in the building field, comprises an inert mineral in the form of granules or sands or chips, a mineral filler, for instance silica, and an oven-curable resin, for instance a polyester resin. Said composition further comprises at least a synthetic material which acts as an inert and/or a filler and it is used, in a predetermined amount, in the form of powder or of chips.
