Abstract (en)
[origin: WO9938949A1] The invention relates to two- or multiphase detergent forms consisting of compressed particulate detergents comprising tenside(s), builder(s) and optionally, other detergent constituents. The tenside content of the individual phases of the detergent form does not vary by more than 3 wt. % in relation to the weight of the individual phase. By aligning the tenside contents of the individual phases of the form as far as possible in this way, it is possible to obtain multiphase detergent forms with excellent properties.
