Abstract (en)
A rotatable display device, in particular for displaying products in a store, comprising a frame (2,3) and at least one support (8) rotatable with respect to this frame. The support is freely rotatable about an axis (6), which, in the active position of the rotatable display device, is inclined at an angle of 1 to 20 DEG , more in particular of 2 to 10 DEG , and is preferably 3 to 5 DEG with respect to a vertical (7). There is thus obtained a self rotating rotatable display device, the support of which will always assume a position in which the greatest weight is always directed to the same side. At an even weight distribution the support will remain at a standstill. <IMAGE>
