Abstract (en)

[origin: EP1051944A1] The invention has as an object a device for the adjustment in height of the upper rack of a dishwasher. The device comprises two pairs of cross levers (6-7) hinged to each other at a center line (8) that extends in height inside the washing tub along respective side walls of the same. The levers (6-7) have first ends that are suitable for the support of the upper rack (17) and second ends that are controlled to be drawn near and apart from each other by a pair of screw devices (28) that extend horizontally along said side walls of the machine and are provided with control elements (29) that are accessible from the front of the machine. <IMAGE>
