Abstract (en)

[origin: EP1052066A2] The pliers comprises of two jaws (11,12) that are formed at the end of two elongate sections that form handles at the other. The two sections are joined at a pivot that includes a thumb operated ratchet (52). This engages teeth (51) formed on the inner surface of a straight slot. Opening the ratchet enables the closed clearance of the jaws to be varied according to the intended application.
