Abstract (en)

[origin: EP1052193A1] A container is disclosed for stocking and transporting motorcycles and other similar two-wheel vehicles, realised with metal structure, of parallelepiped shape, and provided with side closure walls of which at least one is tiltable horizontally to facilitate loading and unloading the motorcycle. Said container is characterised in that it is made up of a base (3) and of two side vertical walls (4), which are releasably coupled in their lower side to the above base, thus realising the final frame (1). Further on said two side walls are capable of being bent inwards of the frame so as to form a pack of minimum dimensions. Finally, at least one of said walls is capable of being bent also outwards of the frame itself to allow loading the motorcycle (2). <IMAGE>
