Abstract (en)

[origin: EP1052205A1] The invention relates to a device for continuous transport of packed goods, such as barrels, boxes and crates, in which an elongated end of the transport device is adapted to extend into a container, trailer and the like, for loading or unloading the packed goods in the container. According to the invention a manipulator is arranged at the end of the transport device, which manipulator is provided with a tool to engage the packed goods, the manipulator being designed such that with the help of the tool packed goods can be placed from the transport device into the container, and that packed goods can be placed out of the container on the transport device, in which the engagement tool is moveable in longitudinal direction along the end of the transport device. <IMAGE>
