Abstract (en)  
[origin: WO9936297A1] This invention addresses environmental social and commercial uses and includes a monitoring system (310) which is a network of on, in, out and off-board devices working together with people through software (311) and interfaces (306a) to provide services and make accountable humanity's machines and their actions through safe secure communications. Control devices are used to provide accountability for their socio-economic and environmental impact. Along with these systems networked together, additional devices (315, 316, and 317) and variations needed to complete these operations nationally and world wide are also provided. Unique ways interface a network of separate devices or IC circuits to create an interactive secure control system or center that can be remotely controlled. A control device for society to fairly and accurately monitor and control the impact of equipment use on the world environment, and a nation's infrastructure while developing commercial companies to fulfill these needs and services for the equipment and the people who own and operate them for today and into the future are also provided. A set of secure devices and systems are also included to analyze society and machine interaction.
