Abstract (en)
[origin: WO9938888A2] Subject of the invention are peptides capable of inhibiting the serine-protease activity associated to the NS3 protein of HCV virus, their uses and a process for their production comprising the proteolysis of polypeptides containing at least one among the sequences of the NS3/NS4A, NS4A/NS4B, NS4B/NS5A and/or NS5A/NS5B junction sites of the polyprotein of HCV virus.
